LifeCharter Command Suite: Investor Brief

Prepared October 2026 · AmiLynne Carroll

A founder-led operating system for service businesses, with an executive coach built into every account. This brief supports a one-time ask of $11,500 and is written for investors who want the whole picture, including what is not yet proven.

Executive summary

What it is. LifeCharter Command Suite (LCCS) is a business operating system for the owners of any kind of business. Its first audience is coaches, consultants and professional-service owners. One subscription gives the founder the system (strategy, CRM, sales, marketing, finance, projects, content, compliance and an AI assistant) and the human guidance to run it. Executive coaching leads every plan.

The idea. Software alone does not change how a founder works, and coaching alone leaves no system behind. LCCS pairs them. The coach onboards, audits, plans and holds each client accountable. The software records, scores and automates what the coaching decides, and shows both sides whether the business is getting healthier.

Where we are. The platform is built and live: more than 1,300 commits, over 100 working pages, a CRM with booking and email engines, finance, a scoring model, an AI assistant that acts behind approval, a community app and a certification portal. We are pre-scale. A first cohort of 3 paying Starter clients and 5 Pre-Founder beta testers is onboarding and paid acquisition began in October 2026. The business holds no debt, and monthly income covers existing payroll and monthly expenses. We do not claim a growth curve yet, and this brief says so wherever it matters.

The ask. $11,500, one time. The primary ask is $6,500 for marketing; the secondary ask is $5,000 for the final software builds that complete the Command Suite and its approval on the Apple, Meta and Google platforms. The business is built and already has clients, so the ask accelerates it. The base case reaches 105 paying clients and about $52,000 in monthly recurring revenue (roughly $626,000 annualized) by month 12, at founder prices, funded by client revenue and the founder's own audience. The start date is November 1, 2026, with a 60-day delay before debt service begins on January 15, 2027.

Why it is a good bet

- **Front-loaded contract value.** Each client pays a $2,497 to $4,997 implementation fee, then $347 to $997 a month. Average first-year value is about $9,000.
- **Built, not promised.** The product risk has largely been paid down. Most of the money goes to reaching people, and the secondary $5,000 to further development.
- **A funnel that already measures itself.** Every session reports clicks, registrations, attendance, bookings, closes and cost per close.
- **Leverage in the delivery.** Group coaching and software serve many clients per hour of coach time.
- **Owned distribution.** A founder-led brand, a recurring live event engine and a 10% affiliate program.

The problem

Founder-led service businesses run on the owner's head. Strategy lives in a notebook, leads in a spreadsheet or three apps, money in an accounting tool nobody reviews, and the owner is the only system. Three failures repeat:

1. **Tool sprawl without a plan.** Founders buy a CRM, a scheduler, a course platform and an AI tool, then use a fraction of each. Nothing connects, and no one tells them what to do first.
2. **Advice without implementation.** Courses, books and coaching produce insight. None of it is wired into daily work, so it fades within weeks.
3. **No feedback loop.** They cannot see whether the business is getting healthier, so they cannot tell whether what they are doing works.

The cost is time (admin crowds out selling), cash (follow-up that leaks, spend nobody reviews) and risk (compliance and succession gaps). For coaches and consultants it also caps growth: the business they sell help for is often the least systematized one in the room.

The solution: an operating system led by an executive coach

LCCS gives each client one account, one health score and one list of next steps, and a coach who reads all three.

Step	What happens	What the software does
1. Audit	Three assessments (Brain, Soul, Profit) become a Business Command Audit.	Scores the business across 8 operational pillars and 12 business dimensions.
2. Plan	The coach and client turn the audit into a Business Plan, Marketing Plan and Sales Plan.	Writes sections and fields behind an Approve button; exports PDF and Word.
3. Install	The first 30 days: a guided Starter Guide, assessments, first SOP, CRM and booking set up.	Tracks each step and unlocks the next; sends the welcome series.
4. Run	Weekly coaching calls and a daily task list.	CRM, campaigns, bookings, finance, projects and content in one place.
5. Measure	Scores move as tasks finish, follow-up improves and numbers come in.	Business health by business, trends and what to fix next.
6. Scale	Quarterly intensives, an annual retreat, a team workspace.	Team roles, guests, affiliates, client and contractor sharing.

The client does not have to learn software to benefit from it. The coach tells them what to do on Monday, and the Suite already has the page open.

Why executive coaching leads the software

This is the core of the model. In LCCS the coach is not an add-on to a SaaS subscription. The coaching is the product's front door, its onboarding, its retention engine and its sales conversation. The software is the system of record that makes the coaching stick.

The coaching rhythm included in every plan (all times Mountain)

When	Call	Purpose
Monday 10am	Weekly Alignment Anchor	Last week's wins and challenges, this week's goals. The one call to make if only one.
Tuesday 6pm	Dimension Call (90 min)	Growth, Hope Seat, SOUL Session and Community on a rotating week; a networking mixer on a fifth Tuesday.
Wednesday 1pm	Sales & Marketing Coaching	20 to 30 minutes of teaching, then open support.

When	Call	Purpose
Thursday 11am	Command Suite Office Hours	Tech and setup help, with a build-along every other week.
Friday 10am	The Inner Command	Mindset for life and business.
Every other Thursday 1pm	New Client Launch Call	Guides the first 30 days.
Quarterly	Intensive (Growth and VIP)	A Friday and Saturday, 10am to 2pm, on Zoom.
Annually	In-person retreat	For Command Suite clients.

Before a client ever subscribes, the same coach leads the sale: a free live MasterClass, then an Executive Consultation. Founding clients also get a 1:1 call before onboarding begins.

Why leading with coaching works commercially

1. **Conversion.** The buyer is a founder who wants to be told what to do, not handed a login. A consultation converts the problem into a plan, and the plan into the subscription.
2. **Retention.** A weekly cadence gives a reason to open the Suite every week. Clients who stop using software churn; clients on a call do not drift.
3. **Differentiation.** Pure software competitors cannot copy a trusted human method. Pure coaches cannot copy a working platform.
4. **Compounding data.** Every call sees the client's real score and task list, so the coach coaches to evidence, and the product improves from what coaches see.

How the software carries the coach

- The audit, plans and health score give every call a shared agenda.
- Tasks, projects and SOPs turn what was decided on Monday into work done by Friday.
- The AI assistant reads the client's own assessments and acts between calls, always behind an Approve button, so the client stays in control.
- A coach and client see the same numbers. That is the accountability.

How coaching scales without the founder

Group formats serve every client in one hour of coach time. The plan builds a bench of certified coaches through the Coaching Certification portal (already built, with 423 courses), so that delivery capacity grows with client revenue, not with the founder's calendar.

The product: what is built today

Everything below exists in the working application. Status is stated plainly.

Area	What it does	Status
Assessments and scoring	Brain, Soul and Profit assessments produce a Business Command Audit: scores across 8 operational pillars and 12 business dimensions, per business.	Live
Strategic plans	Business, Marketing and Sales plans. The assistant writes sections behind an Approve button. Print, PDF and Word export.	Live
CRM	Contacts, tags, custom fields, pipelines, forms, import, activity timeline.	Live
Email engine	Campaigns (timed series), broadcasts, sequences, event emails and a welcome series, sent from the client's own address.	Live
Booking	Booking pages, Zoom links, reminders, calendar sync.	Live
Finance	Income, expenses, bills, P&L and a Financial Pulse, kept separately for each of the client's businesses.	Live
Tasks and projects	Board, list and timeline views, project templates, sharing with clients and contractors.	Live
Playbook and compliance	SOP library with approval and archive; legal and compliance checklist per business.	Live
AI assistant	Reads the client's own data and acts (drafts, tasks, pages) only after a preview and an Approve. Email is draft-only.	Live
Affiliate program	A tracked link per product, 365-day memory, payout hold, refund handling. Built; not yet exercised on real Stripe events.	Live, unproven at volume
Community and replays	The Collective: events, replays, channels, an installable app.	Live
Certification portal	423 courses with its own checkout.	Live
LC Fledge	Social scheduling and publishing to five platforms, with analytics. Running for the founder; client rollout waits on platform reviews (Meta, Google, LinkedIn).	In review
Onboarding	A 30-day Starter Guide, setup gate, walkthrough emails, demo account, Support Desk.	Live

Foundation and quality

- Next.js and Postgres (Supabase) on Vercel, with row-level security so each client account is isolated. Stripe for billing, Zoom for events, Resend for email.
- Estimated replacement cost: about $100,000 to $195,000 at US freelancer rates (1,000 to 1,300 hours). It was built in roughly 300 to 350 hours with AI-assisted development. An estimate, not an appraisal; the assumptions are in the data room.
- Automated tests run on every change. A page-by-page test checklist covers 112 pages.
- Legal documents (Terms of Sale, Privacy Policy, Year-1 Commitment Acknowledgment, Community Guidelines) are published. The LC Fledge legal pages have been through attorney review; the founder-pricing terms are being drafted for attorney review.
- Access is designed for a team: roles for sales, admin and support, a vault for logins, and a documented SOP library.
- Gaps we have not hidden: Google's restricted-scope security assessment (we chose send-only Gmail to avoid it for now), a formal SOC 2 (not started), and email deliverability on Microsoft inboxes, which we are working through.

How clients are won: the acquisition engine

The engine is a repeating live event that feeds a consultation, backed by owned audience and partners.

Stage	What happens	Cadence
Attract	Founder's content, partner and affiliate shares, podcast guesting, direct outreach (cold email and DM), and paid ads that began in October 2026.	Daily
Register	A free 90-minute live MasterClass, From Hustle to Command. Target: 80 in the room per session, about 120 registered.	Twice a month, Thursdays 5pm MT
Deliver	Teaching, then a first command move built live.	Live
Convert	Executive Consultation with the coach. Follow-up emails run for two weeks after each session.	Within 14 days
Onboard	The implementation call, account created, 30-day Starter Guide.	Day 0 to 30
Retain	Five live executive coaching calls a week for every client, plus 1:1 sessions on Growth and VIP, keeps each client using the Suite and gives them reasons to stay and to refer.	Weekly
Expand	Quarterly intensives, the annual retreat, certification.	Ongoing

Supporting top-of-funnel assets

- **Command Shift:** a free 21-day challenge delivered in its own app, with 23 daily emails.
- **Life by Design Summit:** a free three-day online summit on April 15 to 17, 2027, with a paid Integration Pass.
- **Founder's Half Hour:** a free weekly call open to everyone.
- **Affiliate program:** a tracked link for every product, 365-day attribution and a 10% rate on the founder's offers. Every client can run their own program.

The funnel is instrumented. MasterClass Results reports, per session: link clicks, registered against the goal, attended, consultations booked, closes, ad spend and the cost of each step, and compares session to session.

What the numbers look like in the model. The funnel below is the target for a single MasterClass. There are two a month, 24 a year, so every monthly figure is twice the per-session figure. The target is 80 in the room at each one, supported by about 120 registrations, which is 160 in the room and about 240 registered each month, with a projected 25% closing ratio on booked consultations. The plan adds 3 new clients in month 1, 5 in month 2, 7 in month 3 and 10 in every month after that, 105 in the first 12 months. At the target funnel the same MasterClasses would produce 16 clients a month, so the plan is built on about 60% of the funnel's capacity.

Stage	Assumption	One MasterClass	One month (2 MasterClasses)
Registered	Target	about 120	about 240
In the room	About two in three registrants attend	80	160
Consultations booked	Four in ten of those in the room	32	64
Clients closed	25% closing ratio	8	16
First-year value	About $9,011 per client at founder prices	about $72,000	about $144,000

How to read it. Four in ten of those in the room booking a consultation, and one in four of those closing, gives 16 clients a month at the target of 160 in the room. The plan asks for 10, so it needs about 100 people in the room a month, 50 per session, which is 62% of the target. The ramp needs less at first: 3 clients in month 1 needs about 15 in the room per session, 5 in month 2 about 25, 7 in month 3 about 35, and 50 from month 4. The gap between 16 and 10 is the margin for a weaker closing ratio, a lower booking rate or a smaller room. Getting 80 in the room from about 120 registrations means about two in three registrants attend, which is

high for a live event, so the first sessions test attendance as well. The $6,500 is a test budget, released by session: about $1,080 for each of the first six MasterClasses. Paid ads test the cost per registrant; the founder's audience, partners and affiliates, podcast guesting, the Summit and direct outreach carry the volume. The first six sessions measure the real cost.

The differentiator in the room. The MasterClass is led by AmiLynne Carroll, whose coaching-led approach converts a larger share of the room into booked consultations and clients than the sales-driven pitch common to webinar funnels. She teaches first, has the attendee build a first move live, and only then invites them to work together. The booking and closing rates in this model are assumptions, and the first sessions will show how far above the norm they run.

These are working assumptions, not results. The first sessions are the proof point the marketing ask is meant to accelerate.

Business model, pricing and unit economics

The client buys a coached implementation and then stays on a monthly subscription. Software is never sold without the coaching that sets it up.

Plan	Implementation (one time)	Monthly	First-year value
Starter	$2,497	$347	$6,661
Growth	$2,997	$497	$8,961
VIP	$4,997	$997	$16,961

Founder pricing. These are founder prices, held for the first 90 days of the offer. They are expected to rise on January 1, 2027, once the offering, the software and the coaching model have produced data to support it. Every figure in this brief uses the founder prices, so the plan does not depend on the increase.

How founder pricing works for a client who joins at it. The price is locked for the life of the contract: the first 12 months, then month to month afterward at the same price for as long as the client stays. A client who cancels loses founder pricing and, if they return, pays the price in effect at that time. This rewards early clients with a durable advantage, gives retention a second reason to hold, and means the revenue upside from the increase comes from clients who join after January 1, not from re-pricing the founding cohort.

What each plan includes, and its market equivalent. Executive coaching is part of every plan and is not priced separately, because the client cannot have the software without the coaching or the coaching without the software. Every client can participate in five live executive coaching calls each week. The table prices what is included at what a client would

pay for the pieces separately.

The five weekly calls. There are five live calls a week, one each weekday, all led by the coach. Clients choose which to attend.

- **Monday, Weekly Alignment Anchor:** last week's wins and challenges, and this week's goals. The one call to make if only one.
- **Tuesday, Dimension Call (90 minutes):** a rotating focus of Growth, the Hope Seat, a SOUL Session and Community, with a networking mixer on a fifth Tuesday.
- **Wednesday, Sales and Marketing Coaching:** 20 to 30 minutes of teaching, then open support.
- **Thursday, Command Suite Office Hours:** tech and setup help, with a build-along every other week.
- **Friday, The Inner Command:** mindset for life and business.

New clients also join a Launch Call every other Thursday during their first 30 days. Times and the full schedule are in the section on why executive coaching leads the software.

Plan	Founder monthly	Included	Market equivalent per month
Starter	$347	Five live group executive coaching calls a week, the weekly tech-support call, the private community and the full Suite. No 1:1.	$597 to $1,997
Growth	$497	Everything in Starter, plus a monthly 1:1 and a done-with-you kickoff intensive, and the quarterly intensive.	$869 to $2,269
VIP	$997	Everything in Growth, plus two 1:1 sessions a month, direct access between sessions and white-glove ongoing setup.	$1,141 to $2,541

How the equivalents are built. Three published benchmarks are added together.

- **Software:** $297 to $497 a month, the range of an all-in-one marketing platform's published plans (third-party guides).
- **Group coaching:** $300 to $1,500 a month, the range US cost guides give for group business coaching programs, which typically deliver about two sessions a month. Five calls a week is many times that contact, so the range is a floor.
- **1:1 coaching:** $272 a session, the North American average in the International Coaching Federation's 2022 data. Growth has one a month and VIP has two.

The assessments, the SOP library, the community and the AI assistant are not priced in. Founder pricing is therefore a launch price, well below the market equivalent of what is

included. Commercial pricing guides put ongoing individual executive coaching alone at $1,500 to $7,500 a month.

Coaching capacity is the constraint. At the plan case, month 12 carries about 68 one-on-one sessions a month, about 16 hours a week, from Growth and VIP clients alone, on top of the five weekly group calls. This is why coaching delivery is the first thing client revenue funds, and why the price of the coaching is expected to rise with the January 1 increase.

Projected pricing from January 1, 2027. The founder prices end for new clients on that date. The new prices account for the five live calls a week, the 1:1 sessions and the software together.

Plan	Implementation	Monthly	First-year value
Starter	$2,497 to $2,997	$347 to $597	$6,661 to $10,161
Growth	$2,997 to $3,997	$497 to $897	$8,961 to $14,761
VIP	$4,997 to $7,497	$997 to $1,997	$16,961 to $31,461

What changes in the economics. At the 50/35/15 plan mix, average implementation moves from $3,047 to $4,022, average monthly from $497 to $912, and average first-year value from $9,011 to $14,966. If all 105 clients in the plan case were at the new prices, exit-month recurring revenue would be about $95.8K instead of $52.2K. Clients who join at founder prices keep them under the lock-in rule above, so the real figure falls between the two, and the plan in this brief is not built on the increase.

What the new prices depend on. The close rate holding after the increase. The first sessions at the new prices are the test, and the funnel reports it per session.

Revenue lines

- **Implementation fee:** paid at the start; funds the coached setup and the first 30 days.
- **Monthly subscription:** the software, the weekly coaching rhythm and the assistant. This is the recurring base the plan is built to grow.
- **Plan upgrades:** Starter to Growth to VIP, handled in Stripe with an automatic confirmation email.
- **Events and passes:** the Life by Design Summit Integration Pass ($197 early, $297 live), quarterly intensives and the annual in-person retreat.
- **Adjacent offers:** certification, and affiliate commissions on partner sales.
- **Standalone social publishing (LC Fledge):** planned as a separate product; pricing is not yet decided.

Blended assumption used throughout this brief

Assumption	Value
Plan mix (Starter / Growth / VIP)	50% / 35% / 15%
Average implementation fee	about $3,047
Average monthly subscription	about $497
Average first-year value per client	about $9,011

Unit economics, stated as targets to validate

- **Software and infrastructure cost per client:** low and mostly variable (hosting, email sending, AI usage). Email sending runs through each client's own sending account. AI usage is the one cost that grows with use, so the plan is to meter it per client and move heavy use to client-supplied keys. The exact figure per client is measured in the data room, not asserted here.
- **Coaching delivery is the real cost of goods.** It is founder time today. As client revenue grows, the business hires and certifies additional coaches so delivery scales past one person.
- **Customer acquisition cost** is unknown until paid ads have run for several sessions. The funnel is instrumented so it will be a measured number, not an estimate, within the first 90 days.
- **Payback:** because the implementation fee is paid up front, the average client returns about $3,047 of cash on day one, which covers a large share of any plausible acquisition cost before the first subscription payment.

Why the model holds together. The implementation fee funds acquisition, the subscription compounds, and coaching is both the reason clients buy and the reason they stay.

Market

Two published numbers frame the opportunity.

- **About 36.2 million small businesses in the United States.** Source: U.S. Small Business Administration, Office of Advocacy, 2025 small business profile (advocacy.sba.gov/?p=30239).
- **More than 100,000 coaching practitioners worldwide, and $4.564 billion in coaching revenue in 2022.** Source: International Coaching Federation, 2023 Global Coaching Study, prepared with PwC (Executive Summary, coachingfederation.org).

The first number is the pool of owner-led businesses that run on one person's attention. The second shows that paid, human coaching is already an established, growing category. The Command Suite sits where they meet: coaching sold together with the operating system that makes the coaching stick.

Who the product is for

- Initial audience: coaches, consultants and creators doing roughly $70,000 to $1M a year, who are the bottleneck in their own company.
- Any business: the Suite is built for every kind of owner-led business. It is not designed around one industry, so its use and its growth potential are not limited to a niche the way most vertical software is. Executive coaching is included in every plan, and every business benefits from it.
- Partners and affiliates, including coaches and practitioners who refer or resell, and who earn commission by bringing clients in.

Bottom-up sizing (illustrative, not a forecast)

The table applies one assumption, the share of U.S. small businesses that become clients, to the founder-price blended average of $497 a month. The percentages are chosen to show scale, not predicted.

Share of 36.2M small businesses	Clients	Recurring revenue per year	First-year value including implementation
0.01%	3,620	about $21.6M	about $32.6M
0.1%	36,200	about $215.9M	about $326M
1%	362,000	about $2.16B	about $3.26B

How to read it. Reaching 0.01% of the pool is a business of roughly 3,600 clients. The plan in this brief reaches about 105 clients in its first year. Most small businesses will never buy a coached operating system, so the serviceable market is a fraction of the 36.2M, and this brief does not claim to know what fraction.

What is not claimed. There is no third-party sizing in this document for "coached business software" as a category. The numbers above are arithmetic on public figures and the pricing in the business model section.

Traction, stated plainly

The Command Suite is built and in production. Distribution is the part that is just starting. This section says exactly where things stand as of October 2026, so nothing in it has to be walked back later.

Area	Status
Product	In production, with more than 1,300 commits of working software: the operating system, CRM, email sequences, AI assistant, finance, SOP library, funnel dashboards, social publishing (LC Fledge), and the Command Shift challenge app.
Accounts	3 paying Starter clients at founder pricing, one signed before launch and two in the first two weeks live, and 5 Pre-Founder beta testers: 8 client accounts in all, alongside the founder's own house account.
Pre-Founder cohort	5 Pre-Founders, beta testers who give feedback in exchange for no implementation fee and no monthly fee until the first charge on April 1, 2027. From then they pay $497 a month for the life of their use of the system, which adds about $2,485 a month once all five are paying.
CRM	33 contacts in the founder's own house account. The audience is still being converted into the system.
Affiliates	8 affiliate records created; the program is live with a tracked link per product.
MasterClass funnel	Instrumented end to end. Paid ads began in October 2026 and 2 real registrants from ads in the first 24 hours. The first sessions are the first data.
Revenue	3 Starter clients at founder pricing: $7,491 of implementation fees ($2,497 each) and $1,041 a month of recurring revenue ($347 each) once monthly billing begins, about 30 days after implementation. Stripe-verified figures are in the data room.
Financial position	No debt. Monthly income covers existing payroll and monthly expenses, so the ask is for growth and not to keep the business running.
Legal	Terms of Sale, Privacy Policy, Year-1 Commitment Acknowledgment and Community Guidelines are published. The LC Fledge legal pages have been through attorney review.

What this means. This is a build-complete product two weeks into its first clients: three paid at founder pricing, five Pre-Founders are testing it in exchange for feedback, and the audience engine is just starting. It is not yet a company with a growth curve. The ask is small because the product is built. The primary ask, $6,500, points a finished product at a market and measures what happens. The secondary ask, $5,000, funds the final builds that complete the Command Suite and its platform approvals.

What is already proven

- The founder can deliver the coaching and the software together, because it is how the business has been run.
- The system is built to run a complete acquisition cycle without manual work: registration, reminders, replay, follow-up, booking, onboarding and a 30-day guide.
- The data is clean enough to measure each stage of the funnel by session.

What is not yet proven

- Paid acquisition cost and conversion at volume.
- Retention past the first year.
- Delivery capacity beyond the founder.

The milestones in the ask section are built to answer exactly those three questions.

Competition and defensibility

The owner-led business already pays for pieces of this solution. None of the pieces is sold together with the coaching that makes an owner use them.

Category	Examples	What it does well	The gap the Command Suite fills
All-in-one marketing and CRM platforms	GoHighLevel, HubSpot, Keap, Kartra, ClickFunnels, Systeme.io	Broad tooling for funnels, email and pipelines	The owner gets a toolbox and no one to build with them. Setup and follow-through are left to the owner.
Coaching and course platforms	Kajabi, Mighty Networks, CoachAccountable, Teachable, Thinkific, Podia, Paperbell	Delivery of content and client management for coaches	Built for the coach's product, not for running the owner's company.
Work and project tools	Notion, ClickUp, Asana, monday.com, Trello, Airtable	Flexible task and knowledge management	Blank canvas. No method, no coaching, no business health picture.
Business operating-system coaching firms	EOS implementers, Scaling Up, Strategic Coach	Method and accountability for larger teams	Costly, mostly for companies with a team, and the software is a spreadsheet or a binder.
Freelance operating tools	HoneyBook, Dubsado, Bonsai, 17hats, Plutio	Proposals, contracts, invoicing	Admin only. Nothing connects the founder's goals to the week.

Category	Examples	What it does well	The gap the Command Suite fills
Calendaring software	Calendly, Acuity, SavvyCal, Cal.com, TidyCal	Scheduling links, reminders and calendar sync	Booking is built in, with Zoom links, reminders and calendar sync, and it feeds the CRM and the coaching calendar. No separate subscription.
Community tools	Skool, Circle, Heartbeat, Facebook Groups, Discord	Hosted communities, courses and events	The Collective is included in every plan: events, replays, channels and an installable app, connected to the client's own account and coaching.
Finance and bookkeeping	QuickBooks, Xero, FreshBooks, Wave	Accounting, invoicing and reporting	Income, expenses, bills, P&L and a Financial Pulse for each of the client's businesses, tied to goals and the weekly review. It replaces QuickBooks.
Email marketing	Mailchimp, Constant Contact, ActiveCampaign, Kit (formerly ConvertKit), Flodesk	Newsletters and email campaigns	Campaigns, broadcasts, sequences and event emails are built in and connected to the CRM, sent from the client's own address.
Sales platforms	Salesforce, Pipedrive, Zoho CRM, Close, Copper	Pipelines, deal tracking and forecasting	Contacts, pipelines, forms, follow-up and a written Sales Plan sit in one account with the coaching, built for an owner-led business and not for a large sales organization.

Where the Command Suite is different. It is the only offer in this table that sells the coaching, the method and the software as one purchase, and measures the owner's business health from the work that actually gets done. It is also a complete offering: clients are not asked to upgrade to unlock additional services. Every feature is included in every plan, and the upgrades are capacity and coaching, such as the number of seats, businesses, email accounts and integrations, and the amount of 1:1 executive coaching.

Why it is defensible

- **Method and brand.** The LifeCharter method and the founder's story and platform are not features a software company can copy. Clients come for the person and the method, and stay for the system.
- **Switching cost grows with use.** Every task, SOP, email sequence, contact, plan and weekly review lives in the Suite, and the health score is built from that history.
- **The coaching loop produces context no competitor has.** Coaching conversations and the Suite's activity data shape what the assistant suggests, in the owner's own voice and context.
- **Replaces a stack.** The client cancels several subscriptions, which makes the monthly fee easier to approve and harder to give up.
- **Speed.** The product was built by a founder who also delivers the service while using it every day in her own business. It ships changes within days, often within hours, and every client's request is visible to the same person who writes the roadmap.
- **No upgrade wall.** Workflows, campaigns and automations are built in on every plan, with no higher tier required to unlock them.

Team

AmiLynne Carroll ("Babs"), founder and Alignment Architect. TEDx speaker, author, executive coach, and Spiritual and Trauma Practitioner. She developed and created the LifeCharter method and LifeCharter Command Suite, delivers the executive coaching, and directs the product. The method comes from her own rebuild, which is the origin of the brand's "Purpose. Clarity. Aligned Action." promise. She is the face of every acquisition channel and the person clients come to work with.

Operating team

Person	Role
Sumbal Khan	Lead administrator: account setup, client onboarding, operations and testing
Marcello	Sales: closer, consultation follow-up and pipeline
Morgan Beach	General support, starting November 2, 2026

How the product gets built. The software is built by the founder working with AI-assisted development, which is why more than 1,300 commits of production software exist without an engineering department. This is a capital-efficiency advantage and also a concentration of risk: product knowledge sits with one person and the repository, which is why documentation and a second engineer are early priorities as client revenue allows.

What client revenue adds as it grows

Hire	Why
Certified coaches (2 to 3, contract first)	Moves coaching delivery off the founder's calendar
Client success lead	Owns onboarding quality and retention
Fractional engineering lead	Owns security, reliability and the roadmap beyond the founder
Paid acquisition operator	Runs ads, creative testing and funnel reporting

Advisors and board. None are named in this version. Adding two or three operators with coaching or SaaS experience is a stated outcome of the first 180 days.

Financial plan: the first 12 months

All figures are arithmetic on the pricing and blended assumptions in the business model section, applied to the sign-up pace below. They are scenarios, while also serving as a meaningful and practical forecast.

Assumptions

- New clients (month 1 is October 2026): 3 in month 1, 5 in month 2, 7 in month 3, then 10 in every month from month 4. That is 105 in 12 months. Note: as of the penning of this document (October 2026) 2 of the 3 projected new clients for month 1 have already been secured.
- Sign-ups come from every channel, not the MasterClass alone. The funnel they require is shown in the acquisition section.
- Blended average: $3,047 implementation and $497 a month per client.
- Each client pays the first subscription in the month they join.
- No churn in the base table. A churn sensitivity follows.

Month	New clients	Active clients	Monthly recurring revenue	Cash collected in the month
1	3	3	$1.5K	$10.6K
2	5	8	$4.0K	$19.2K
3	7	15	$7.5K	$28.8K
4	10	25	$12.4K	$42.9K
5	10	35	$17.4K	$47.9K
6	10	45	$22.4K	$52.8K

Month	New clients	Active clients	Monthly recurring revenue	Cash collected in the month
7	10	55	$27.3K	$57.8K
8	10	65	$32.3K	$62.8K
9	10	75	$37.3K	$67.7K
10	10	85	$42.2K	$72.7K
11	10	95	$47.2K	$77.7K
12	10	105	$52.2K	$82.7K

Case	Clients at month 12	Exit monthly recurring revenue	Annualized run rate	Cash collected in the year
Plan	105	about $52.2K	about $626K	about $624K
Half the pace	about 52	about $26.1K	about $313K	about $312K
Plan with 3% monthly churn	about 91	about $45.3K	about $543K	about $596K

What the plan case means for the $11,500 ask

- **The ask is about a fifth of the first quarter's cash.** In the plan case, collections in months 1 to 3 total about $58.6K, so $11,500 is roughly 20% of it.
- **Client revenue carries the plan.** Cumulative collections pass the $11,500 ask in month 2 of the plan case.
- **Year two starts at a run rate of about $626K.**
- **At half the pace the plan still collects about $312K in the year.** That is many times the ask, and it still proves the funnel and the delivery model.

Churn sensitivity. At 3% monthly churn the plan case ends the year with about 91 active clients and about $45.3K of monthly recurring revenue, roughly 13% lower. Retention is the assumption that matters most after the first 90 days, and it is the first number the early sessions need to establish. Clients commit to a 12-month Year-1 term with an early-termination fee, so cancellations inside the plan's first 12 months are limited mostly to non-payment, and the 3% case is a stress test, not an expectation.

Beyond year one. The expansion lines (quarterly intensives, the annual retreat, certification, affiliate and partner-sourced clients, and the standalone social product) are not in these tables. They are upside, not the case.

The ask: $11,500, one time

The primary ask funds a marketing push and the secondary ask funds the final software builds that complete it, for a product that is already built and already has clients. The business holds no debt and its monthly income covers existing payroll and monthly expenses, so this is growth capital, not a bridge.

Use of funds	Amount	Share	What it buys
Marketing (primary ask)	$6,500	57%	Paid ads and creative to test the MasterClass and Summit funnel against the target of about 240 registrations a month. The rest of the volume comes from the founder's audience, partners and affiliates, podcast guesting, and direct outreach.
Further development (secondary ask)	$5,000	43%	The final outstanding software builds that make the Command Suite complete and approved on the Apple, Meta and Google platforms.
Total	**$11,500**	**100%**	

Where the platform approvals stand. Apple and Meta have first-generation submissions pending. Google is in development. The $5,000 closes these builds.

What completion means. Once each platform is approved, the LifeCharter Command Suite becomes a complete, end-to-end operating system for founders and solopreneurs, with no need for outside software to run their business and build their legacy.

Milestones the ask is tied to

By	What will be true
Month 3 (December 2026)	At least 6 paid-promoted MasterClasses run. Cost per registrant, booking rate and close rate measured. About 15 clients (3, 5 and 7 sign-ups in the first three months).
Month 6 (March 2027)	About 45 clients by March 2027. Retention data from the first cohort. Next come the Life by Design Summit (April 15 to 17, 2027) and the first Pre-Founder charges on April 1, 2027.
Month 12 (September 2027)	About 105 clients and about $52.2K of monthly recurring revenue under the plan case. Churn and payback known. Standalone social product decision made. Data to raise a larger round, or to grow without one.

Instrument and terms. Structured as debt. The start date is November 1, 2026, with a 60-day delay before debt service begins on January 15, 2027. The rate and repayment

schedule are to be set with counsel. This brief does not propose a valuation.

What an investor gets besides capital. A founder-operator who delivers the service and builds the product, and a business where every funnel stage is measured from the first session.

Risks and how they are handled

Risk	Why it matters	Mitigation
Key-person dependence	The founder is the brand, the coach and the product owner.	Certified coaches as revenue allows, documented SOPs (the library is already in the Suite), a second engineer, and a repository with a full history.
Unproven paid acquisition	Cost per client at volume is unknown.	The funnel is measured per session. Spend is staged by session and stopped if cost per registrant or booking rate misses a threshold.
Retention	The value of a subscription depends on clients staying past year one.	The weekly coaching rhythm, a health score that flags drift, and a retention metric reported from month 3.
Delivery quality at scale	More clients can dilute the coaching.	A LCCS coach certification path, a standard implementation call, and a client success role.
Platform approvals	The Suite and its social publishing depend on Apple, Meta, Google and LinkedIn approvals for client use.	Legal pages reviewed by an attorney, redirect and branding work completed. The social product is not on the critical path for the core offer, and the secondary ask funds the final builds those approvals need.
Email deliverability	Some mail providers filter bulk email despite correct authentication.	Per-client sending accounts, authenticated domains, a reputation plan, and a sender-allow step in onboarding.
AI cost and reliability	Model usage grows with clients and models change.	Usage metering, client-supplied keys for heavy use, and an assistant that drafts and waits for approval, so errors do not reach clients.
Data and privacy	The Suite holds client business and contact data.	Row-level security, encrypted credential vault, published privacy policy, a security review planned as client revenue allows.

Risk	Why it matters	Mitigation
Compliance and claims	Coaching and income-related marketing is regulated.	Attorney review of terms and marketing claims, no guaranteed-result language, a published commitment acknowledgment.
Market concentration	Early demand comes from the founder's own audience.	Affiliate and partner channels, the Summit, certification and paid acquisition broaden the source.

The risk this brief does not hide. The product is ahead of its distribution. If the funnel does not convert at an acceptable cost, the plan changes in the first 90 days, which is why the early spending is staged and measured.

Questions an investor will ask

If the product is built, what is the $11,500 for? The constraint is reach, not development. The primary ask is $6,500 for a marketing test of the funnel, and the secondary ask is $5,000 for the final software builds that complete the product and its approval on the Apple, Meta and Google platforms. Growth beyond that is paid for by client revenue.

Why is executive coaching at the front of a software company? Owners do not fail for lack of software. They fail to use it. Coaching is what turns a tool into a weekly operating rhythm, which drives retention, supports the price, and produces the data the assistant learns from. See the section on why executive coaching leads the software.

Can this run without the founder? Not entirely today, and the brief says so. The plan moves delivery to certified coaches, the SOP library documents the processes, and the assistant handles routine work behind an approval step.

What stops a large platform from copying it? They can copy features. They cannot easily copy a method, a personal brand and a coaching relationship, or the switching cost of a client's own operating history.

What are the unit economics today? At founder pricing and the blended assumption, the arithmetic is $3,047 of implementation cash and $497 a month per client. Acquisition cost is the unknown, and it is measured per session from the first paid sessions.

How much is AI and how much is human? The assistant drafts, organizes and reminds, and it acts only behind an Approve step. Coaching, judgment and relationships are human. Email drafting is draft-only.

What happens if AI model prices or behavior change? Usage is metered per client, models are replaceable behind one layer, and heavy use can move to client-supplied keys.

What do clients actually get in the first 30 days? The first 30 days are built so that a founder, likely for the first time in their career, knows exactly where the business stands and has an actionable plan to move it forward in meaningful, practical ways. The aim is clear, guided action that builds a real business and sustainable momentum, not a burst of motivation that fades.

- **A coached implementation call** and an account set up around the client's own business.
- **A clear picture of where the business stands.** The Brain, Soul and Profit assessments produce a Business Command Audit, with scores across 8 operational pillars and 12 business dimensions.
- **A 30-day Starter Guide,** with a time estimate for every day, so the work fits inside a working week.
- **Four guided weeks of action:** vision, offers, pipeline and an income goal; money, bills and a first weekly review; a first SOP, the legal and compliance checklist, and a Business Plan and Marketing Plan; then a quarterly goal and a monthly check-in.
- **A weekly coaching rhythm,** with five live calls a week and a coach who reads the same numbers the client sees.
- **A website alignment review** within 14 days.

How is client data protected? Accounts are separated in the database, credentials sit in an encrypted vault that needs the user's Suite password, and the privacy policy is published. A security review is planned as client revenue allows.

What is the exit? No exit is promised. Plausible paths are a sustained cash-flow business, acquisition by a coaching or CRM platform, or growth through a certified practitioner network.

Who owns the intellectual property? The entity and IP documentation are in the data room.

What would make you stop? If cost per client acquired stays above what the first-year cash covers after the first six sessions, spending stops and the plan is revised before more capital is used.

Data room and next steps

Everything in this brief can be checked. The data room holds the underlying records, so a diligence question has a document behind it.

Item	What it shows
Stripe revenue and subscriber export	Revenue, plans, upgrades, refunds
MasterClass Results report	Registrations, attendance, bookings, closes and ad spend by session
Live product walkthrough and demo account	The Suite as a client sees it
Feature Directory	Every feature, with when it was built and what it does
SOP library	The documented processes, with approval status
Entity and IP documents	Ownership and structure
Legal documents	Terms of Sale, Privacy Policy, Year-1 Commitment Acknowledgment, Community Guidelines
Financial model	The scenarios in this brief, with every assumption editable
Security and privacy summary	Data separation, credential vault, access controls
Replacement-cost assumptions	Hours, rates and exclusions behind the estimated cost to build the product

The request. $11,500, one time, to point a built product at a measured funnel and learn within 90 days what an acquired client costs and how long one stays. The primary ask is $6,500 for marketing, and the secondary ask is $5,000 for the final software builds that complete the product and its approval on the Apple, Meta and Google platforms. Contact details are on the message that accompanies this brief.

Why timing matters

Time is of the essence. Year end is when business owners take stock of the current year and decide what the next one will look like, and they spend and commit accordingly. A founder who is guided through that review in November and December enters January with a plan and momentum. One who waits enters it with a resolution.

What the research indicates

- **Q4 is the strongest quarter for software.** FastSpring's data from more than 3,500 software companies puts Q4 at 106% of an average quarter's sales, against 97% to 99% for the other three. It attributes part of the B2B lift to buyers using budget before it resets and setting up tools before the new year.
- **Small businesses move at year end.** Ramp's year-end spend data shows software spending among small and large SMBs rising 61% and 76%, against about 4% for mid-market and 2% for enterprise.
- **Momentum fades quickly.** Psychologist John Norcross of the University of Scranton followed people who made resolutions: 29% had dropped them by mid-January, 36% by February, and more than half by June.

These are third-party datasets, and most are not specific to coaching or to the Command Suite. They are indicators of seasonality, not forecasts.

What this means for the ask

- **Funding on November 1, 2026 reaches the MasterClasses of November and December,** the weeks when owners are reviewing the year, before the January planning season.
- **Founder pricing ends on December 31, 2026.** Clients who join before then keep it for the life of their contract, which gives the year-end audience a reason to act now.
- **A delay is not neutral.** Each month later pushes the first measured cost per registrant, the first retention data and the January pricing decision further out.

Next steps

I would welcome a conversation, which can include a live walkthrough of the LifeCharter Command Suite over Zoom. I am glad to make myself available at your convenience.
