1. Set up your Command Suite (the first screen a client sees)

Connect your AI first, then the three assessments, then at least one tool. A progress bar shows where the client is.

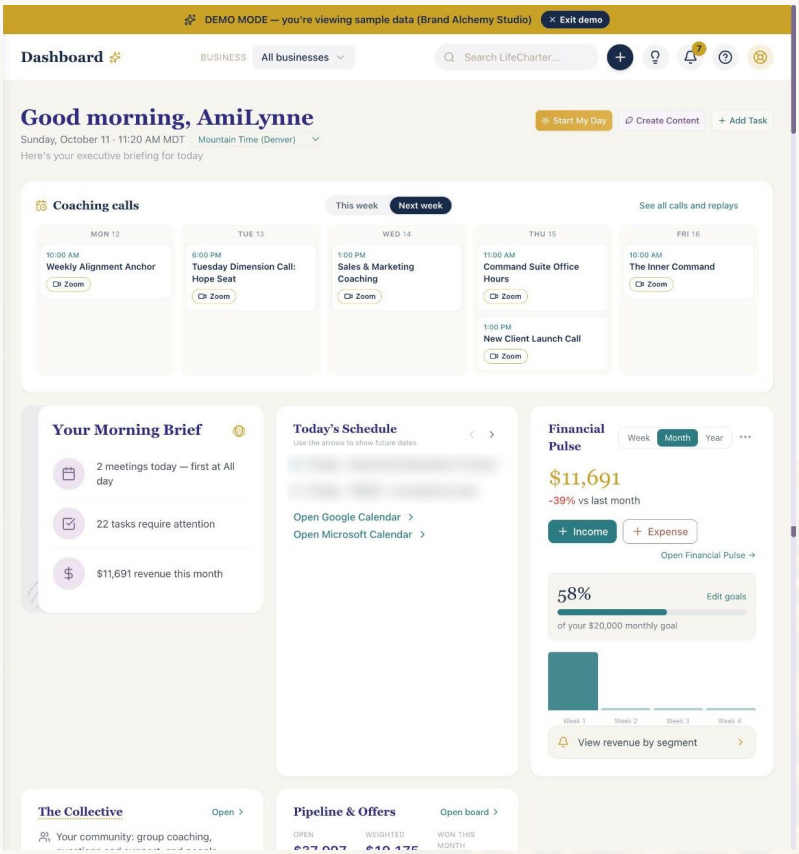

2. First 30 Days

Three assessments, then four guided weeks that open one at a time.

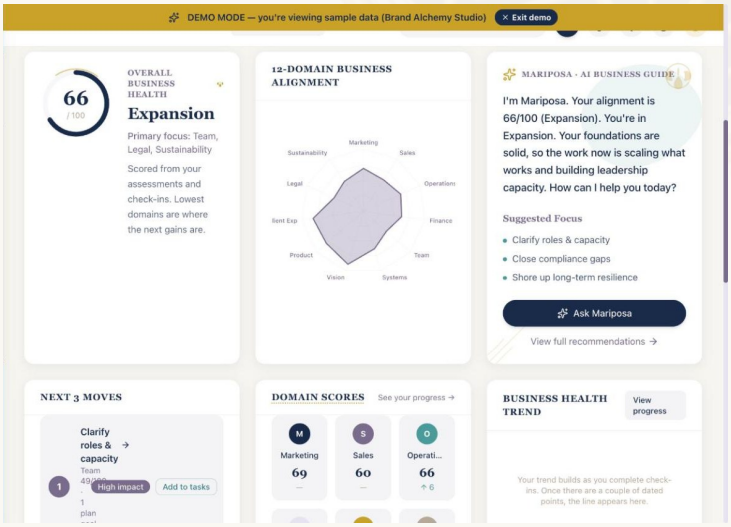

3. Executive Home

The owner's dashboard: the week's coaching calls, the morning brief, the schedule, the financial pulse and the pipeline at a glance.

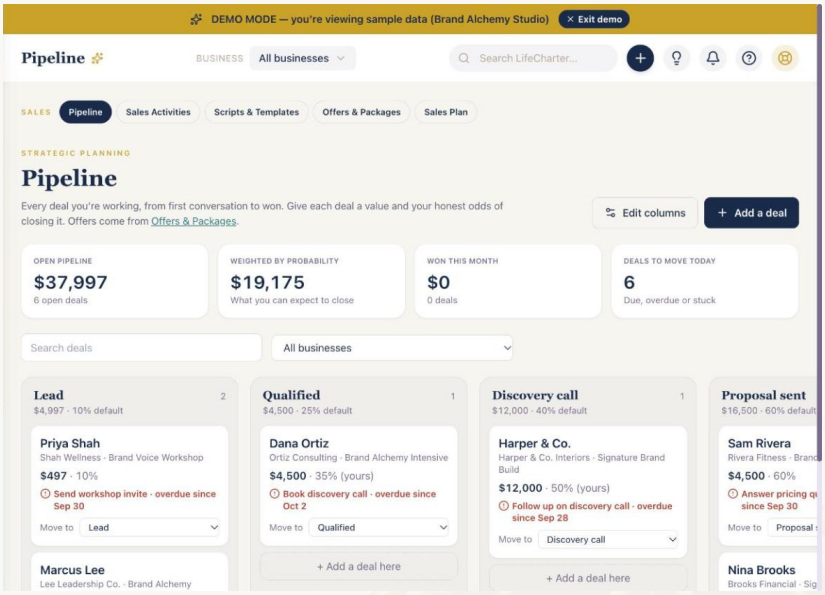

4. 12-Domain Business Alignment

The health score, the domain map and the next three moves.

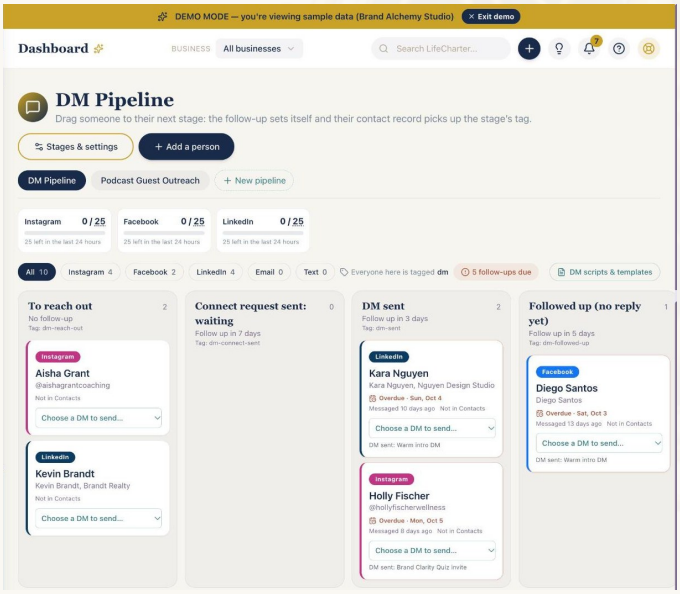

5. Pipeline

Every deal with a value, honest odds and the next action.

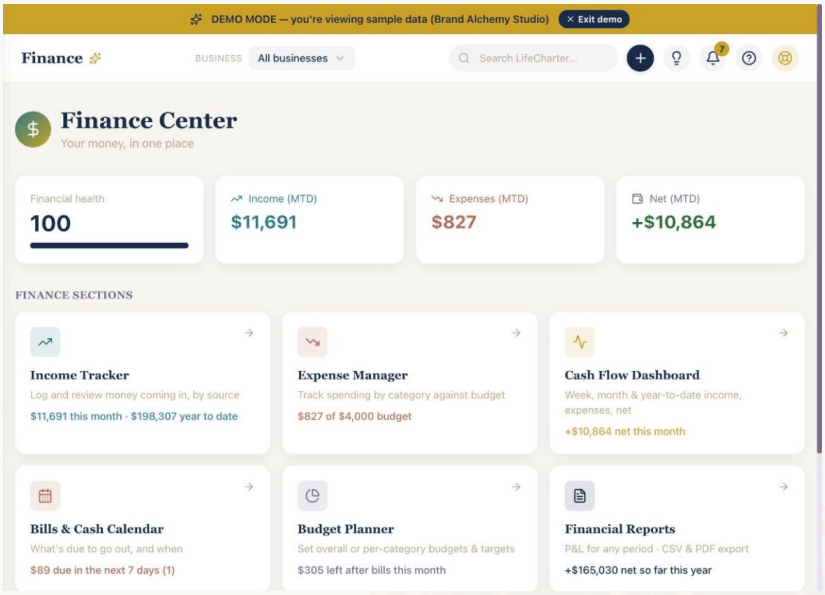

6. Outreach Pipeline

Who to reach, who has been messaged and who is due a follow-up, by platform, with a daily limit for each.

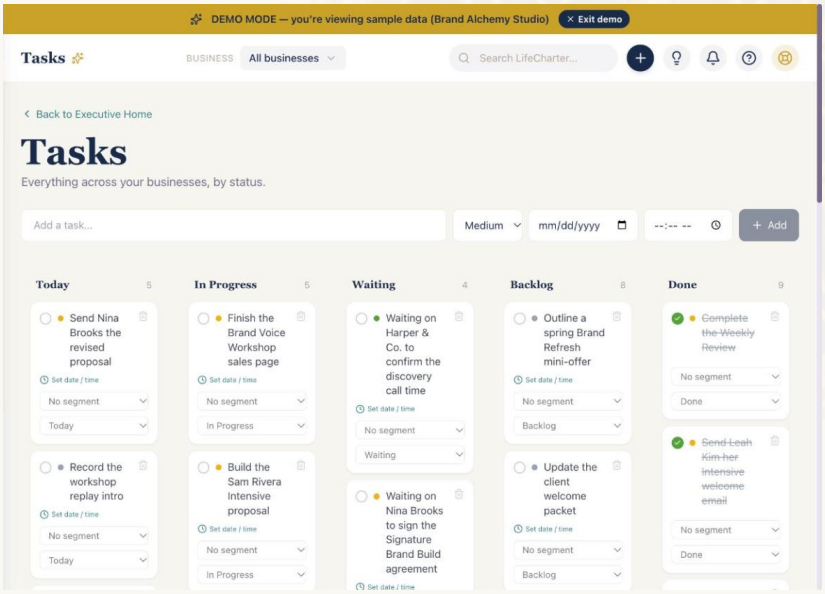

7. Finance Center

Income, expenses and net in one place, with cash flow, bills and budget.

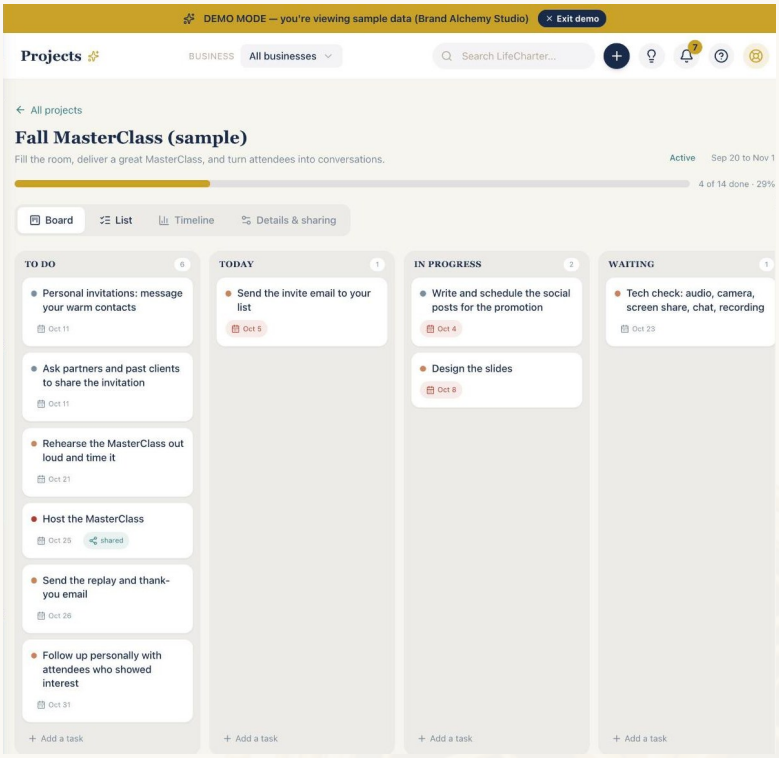

8. Tasks

Everything across the businesses, by status.

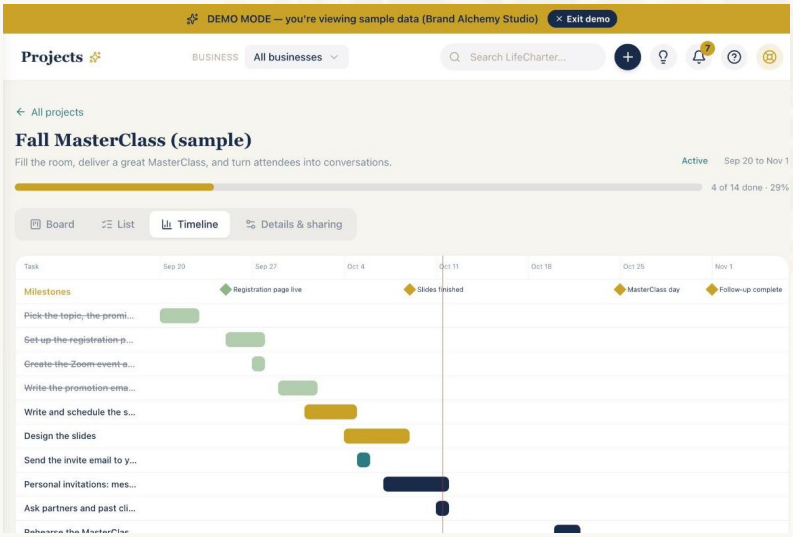

9. Project management: board

A project's tasks by stage with due dates, a progress bar, and sharing with clients and contractors.

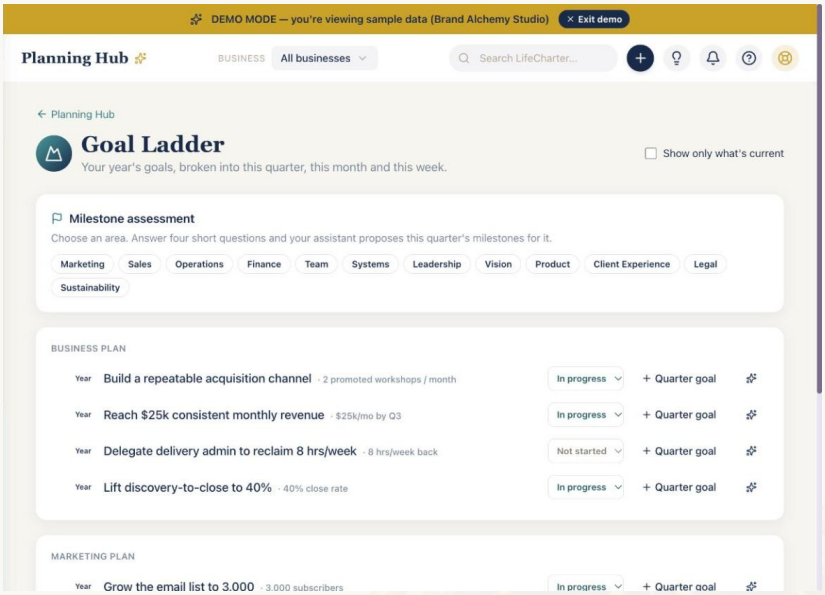

10. Project management: timeline

The same project as a timeline, with milestones, today's marker and each task's span.

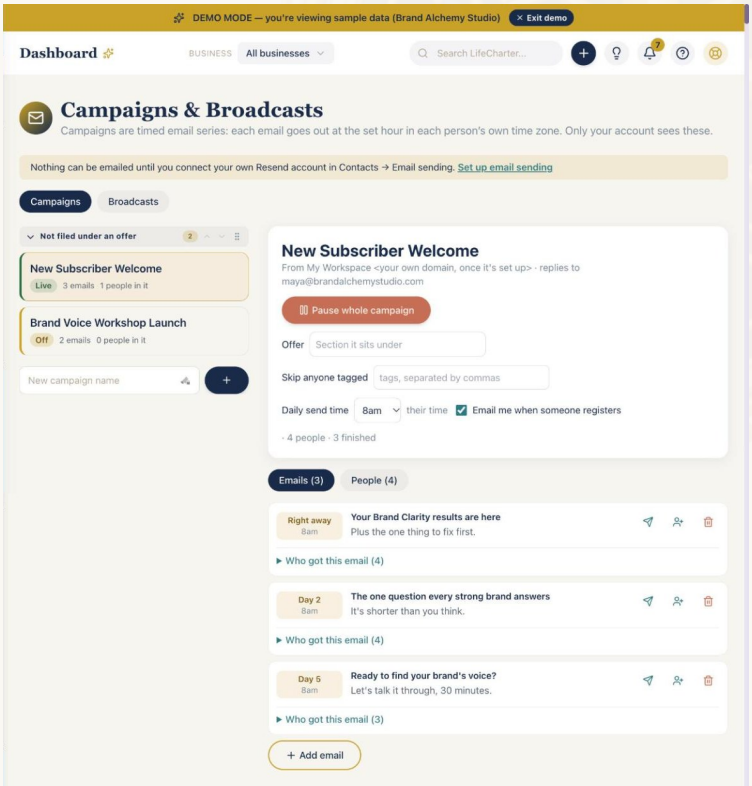

11. Goal Ladder

The year's goals broken into the quarter, the month and the week.

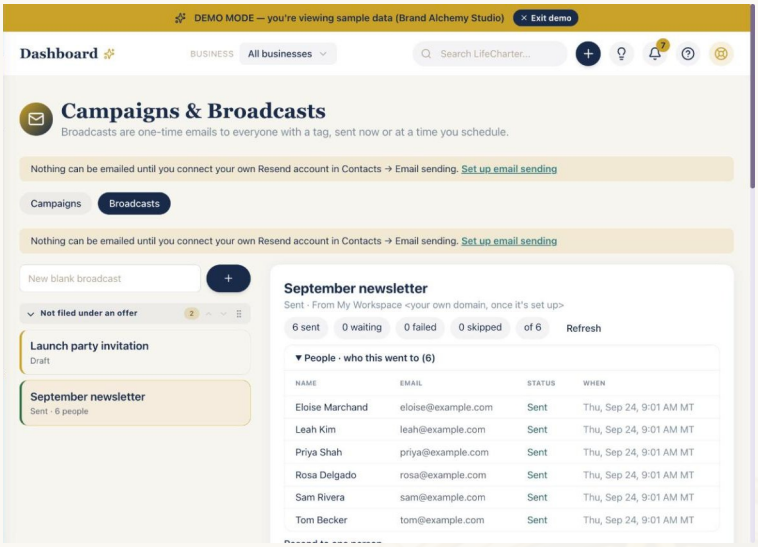

12. Campaigns (full page)

Timed email series with a live status, an offer and a send time. The page shows the series, its settings, and each email with its timing and who received it.

13. Broadcasts

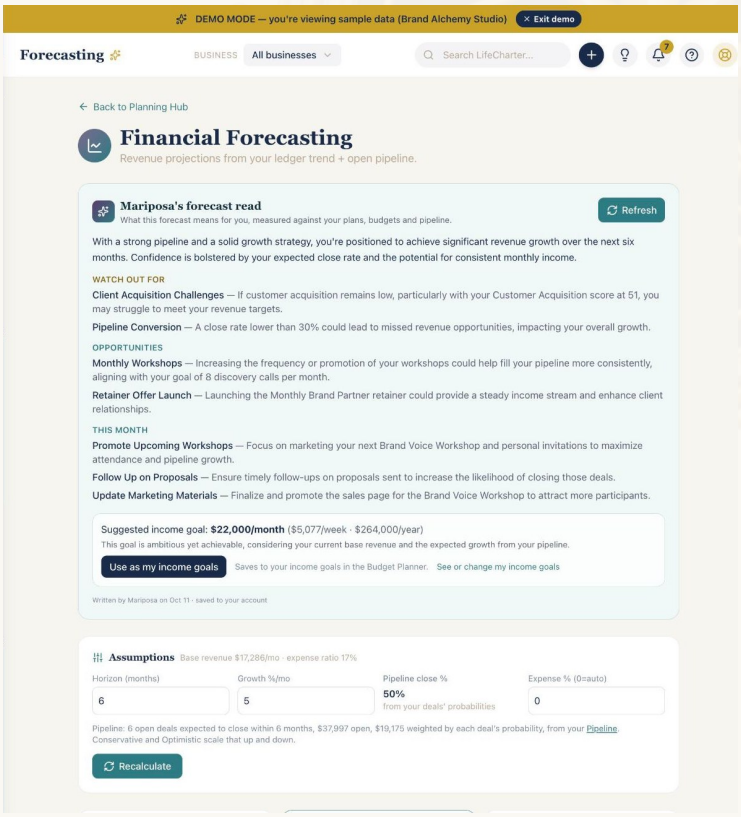

One-time emails to everyone with a tag, with delivery status for each person.

The assistant at work

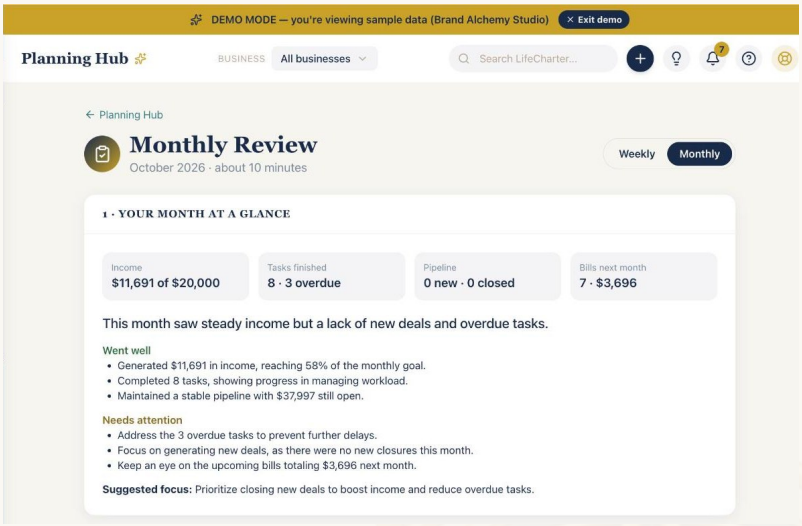

14. Mariposa's forecast read

The assistant reads the forecast against the plans, budgets and pipeline: what to watch out for, the opportunities, this month's moves, and a suggested income goal.

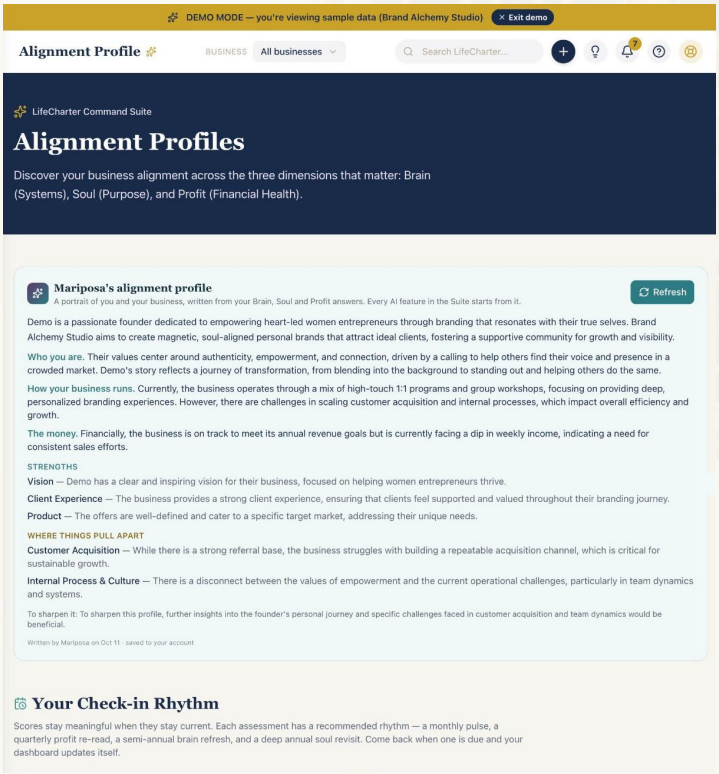

15. Monthly Review

The month at a glance from the client's own numbers, what went well, what needs attention and a suggested focus. Three questions and three tasks follow.

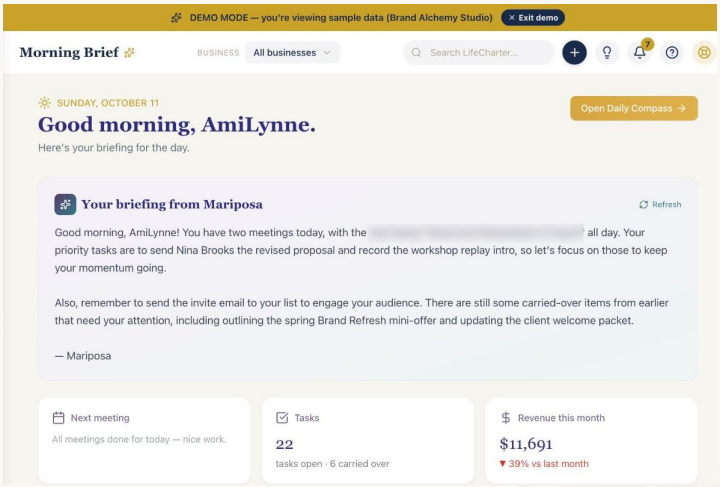

16. AI Assistant (named by client) Profile

A portrait of the founder and the business, written from the Brain, Soul and Profit answers, with strengths and where things pull apart.

17. Morning Brief

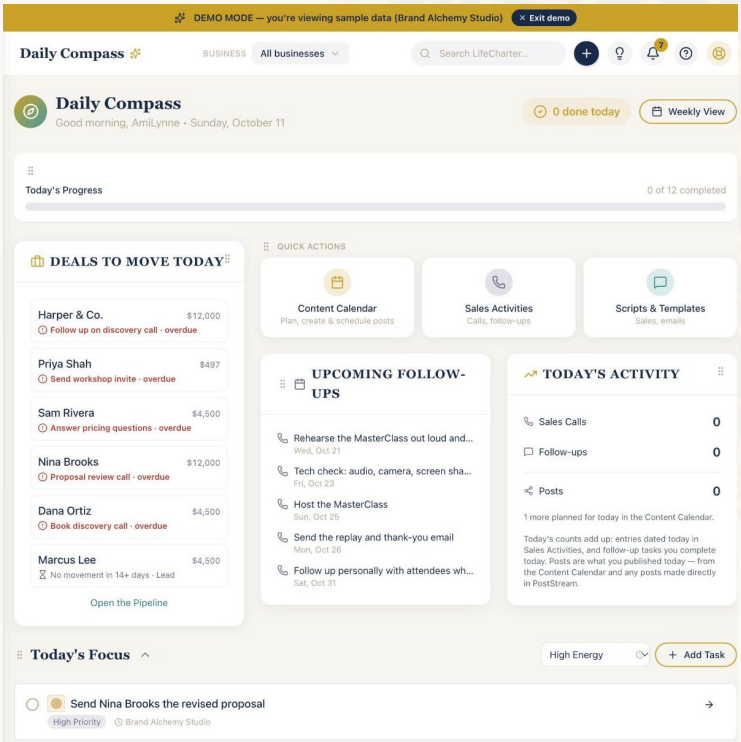

A short written briefing each morning: the day's priorities, what carried over, and the numbers that matter.

More of the platform

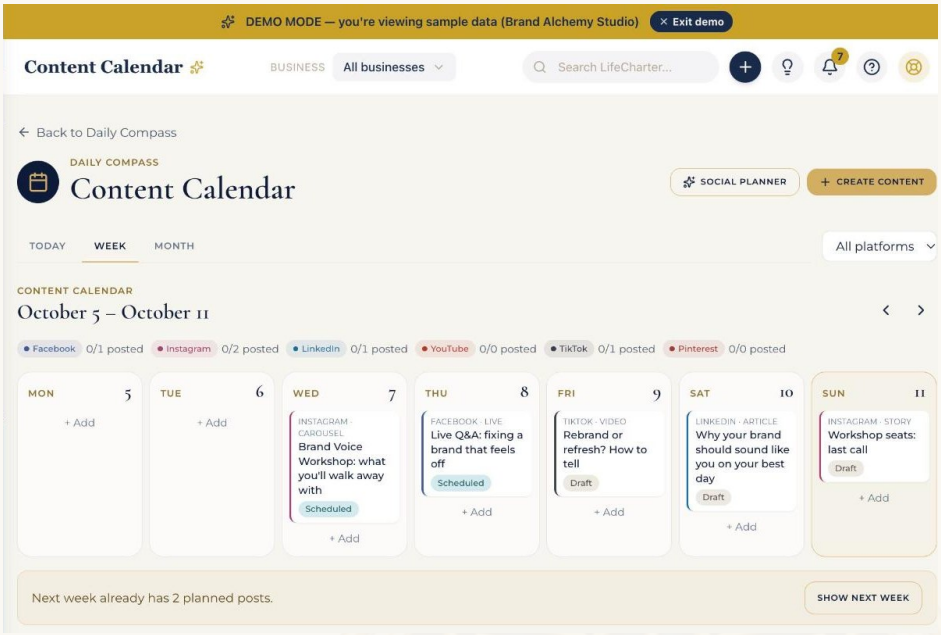

18. Daily Compass

The day on one screen: deals to move, upcoming follow-ups, today's activity and the focus list.

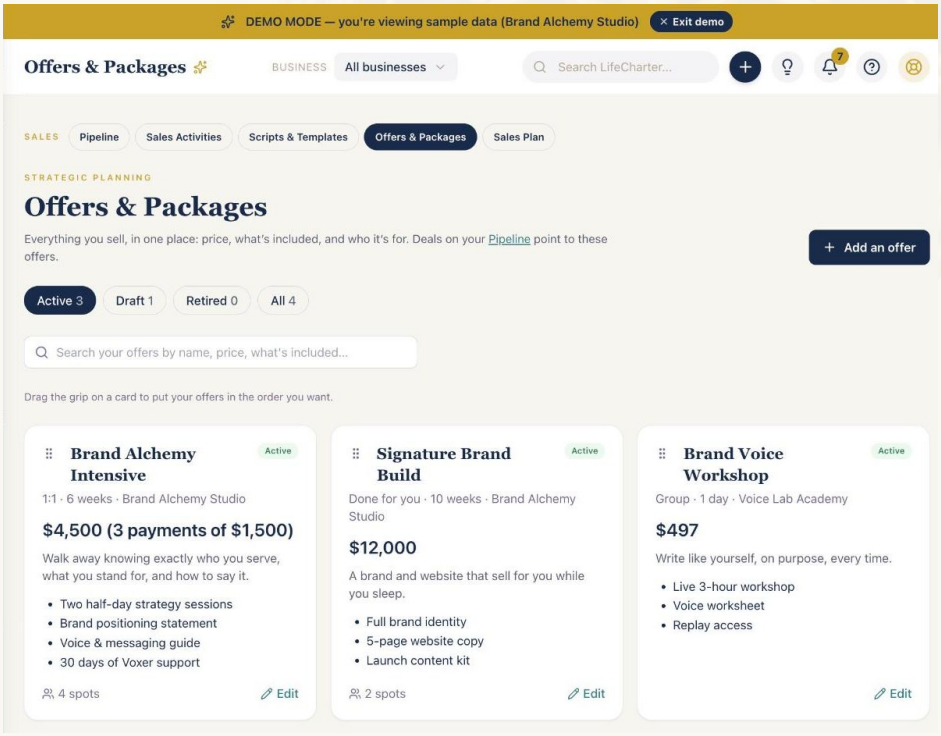

19. Content Calendar

Posts planned across every platform by day, week or month, with what is drafted, scheduled and posted.

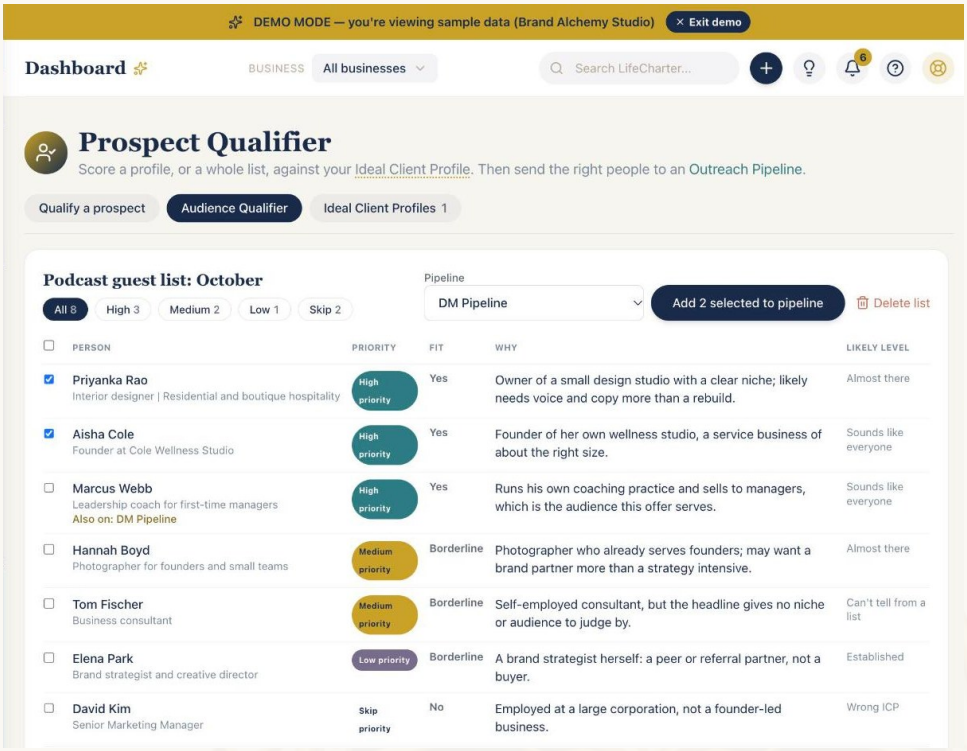

20. Offers & Packages

Everything the business sells in one place: price, what is included, who it is for and the spots left.

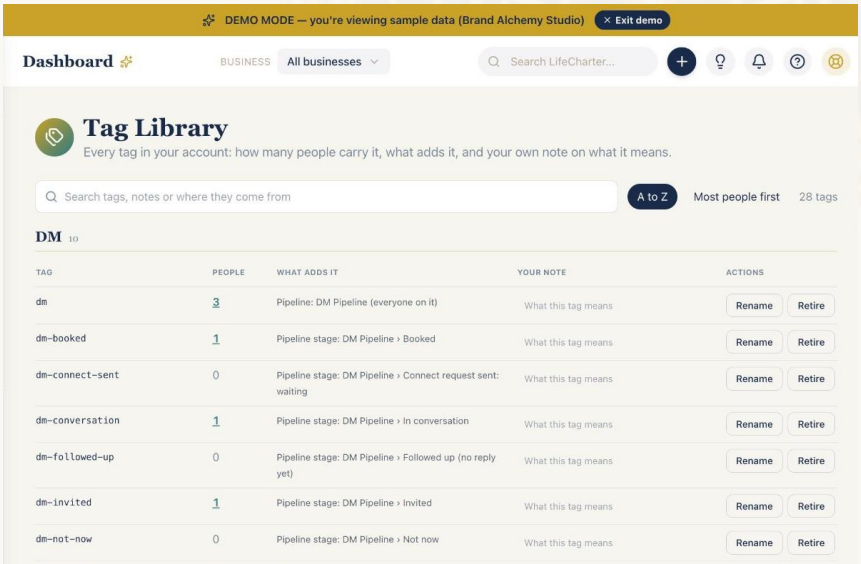

21. Prospect Qualifier

Score a profile or a whole list against the ideal client: fit, priority and likely level, then send the right people to an Outreach Pipeline.

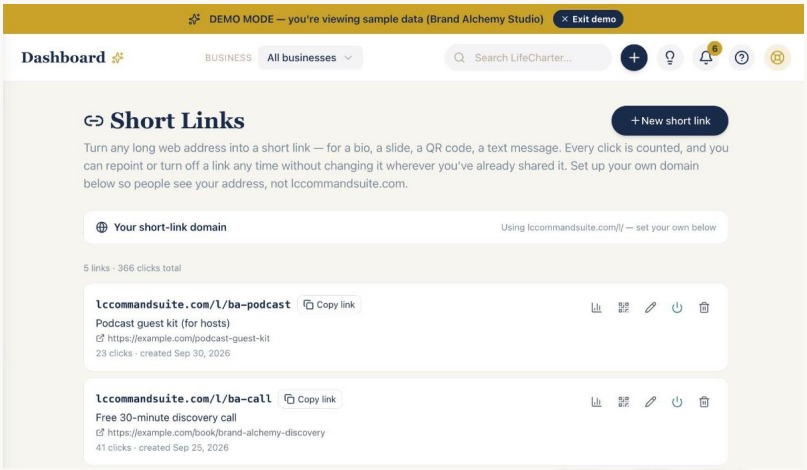

22. Tag Library

Every tag in the account: how many people carry it, what adds it, and a note on what it means.

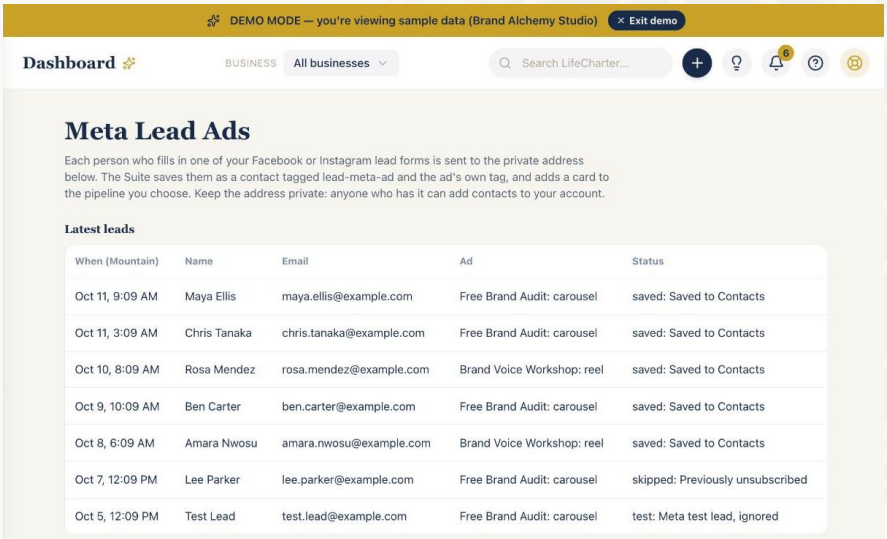

23. Short Links

Short, trackable links for a bio, a slide or a QR code, with every click counted, on the client's own domain.

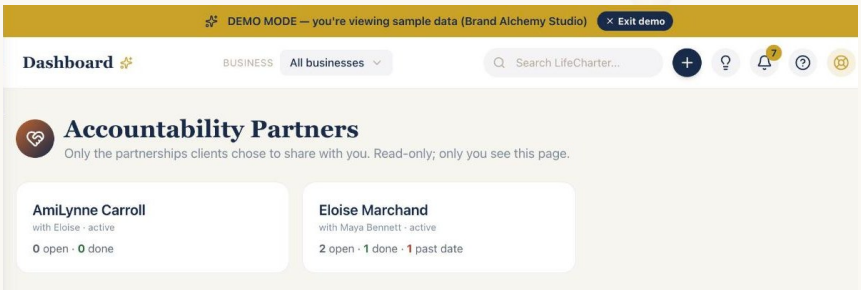

24. Meta Lead Ads

People who fill in a Facebook or Instagram lead form become contacts and pipeline cards automatically.

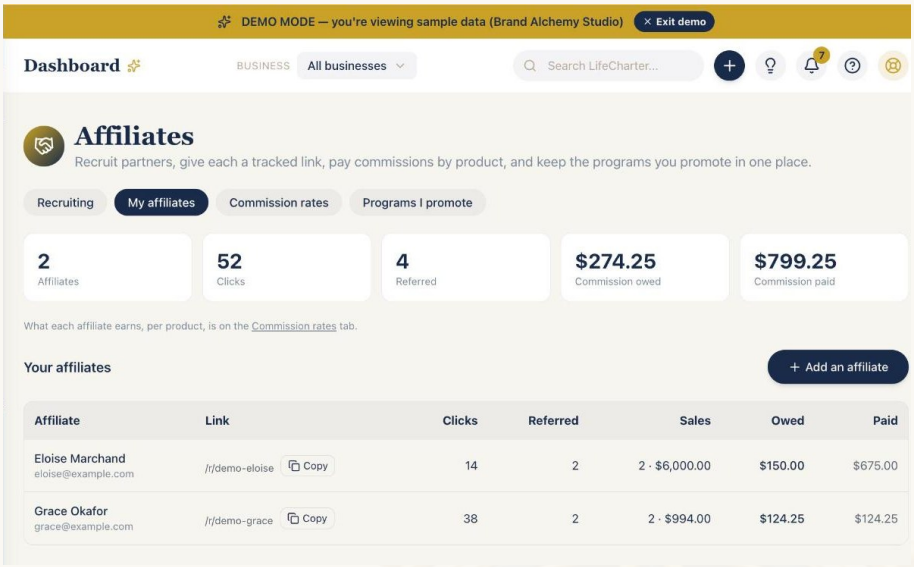

25. Accountability Partners

Only the partnerships clients choose to share with the coach: read-only, with open, done and past-date counts.

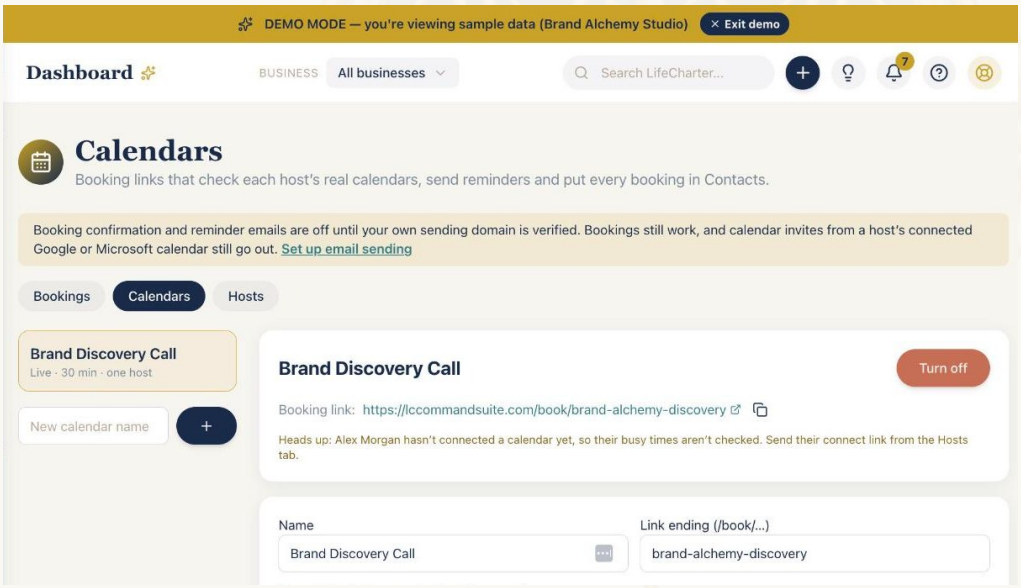

26. Affiliates

Partners with tracked links, commission by product, and what is owed and what has been paid.

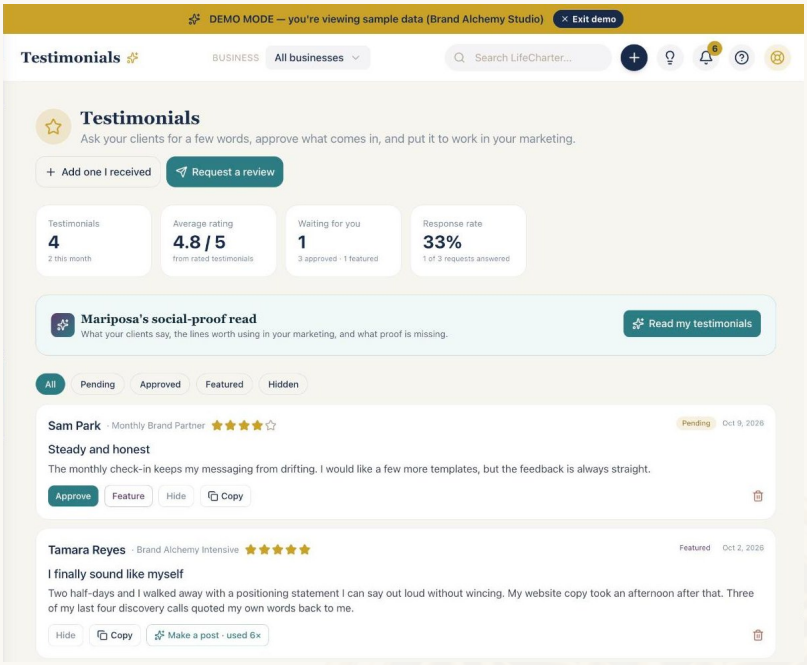

27. Calendars

Booking links that check each host's real calendar, send reminders and put every booking in Contacts.

28. Testimonials

Ask clients for a review, approve what comes in and put it to work; the assistant reads them for proof.

Notes on these captures

Captured in demo mode, which uses sample data from Brand Alchemy Studio. The left menu is cropped out of each. Executive Home stops above the personal Today's Schedule card, and a personal calendar entry in the Morning Brief text is blurred. Screens 14 to 17, and the social-proof read on screen 28, are the assistant's actual written output for the sample business; the assistant's name in those screens is the default, and each client can name their own. Screens 12 and 13 show a notice that email sending needs a connected Resend account, which is the demo's first-time state. Screens 21, 23, 24, 26 and 28 use sample records added to the demo business: the names and email addresses are fictional (example.com), and the Meta Lead Ads address is a placeholder, never a live key.
